

AI & AUTOMATION RESKILL TRAINING

1 Day to envision your future job

An overwhelming majority of the workforce is struggling with the threat of Artificial Intelligence and Automation. The ghost of losing your job to a machine leads to overprotective behavior in reduce openness to embrace the key capabilities of Digital technologies: **transparency, efficiency, collaboration, continuously evolving.**

In the process of helping companies embrace Digital and emerging technologies like Artificial Intelligence, Blockchain, Virtual Reality and Internet of Things, I've seen hands on the biggest problem is not the technology, it's people.

What I mean by a problem is the fact we expect people to be able to fill in the gaps of continuously changing systems and processes, technology being evermore present in the tasks they perform, and in helping talent realize what is their role in helping the business keep its momentum.

Education is the first step. Real-life mundane examples, not moonshots!

But before trying to train everyone in data science or coding, they need to understand how all of this can play a role in what they do today, and how they can be the owners of their own job evolution.

I want this training to be used as an enablement tool for the talent in your organization to become the drivers of evolution because they understand what technology, digital transformation, user-centricity and data-driven thinking means.

Rather than having to push change, they will be directing it to the right outcomes, in a format that everyone in the organization understands and feels is a part of their mandate to lead.

I will enable every participant to:

- Prepare some material before, and think about what it is they do.
- Learn about what AI and automation mean
- Apply them to what they do
- Safely redesign their roles and how their career can progress
- Bridge the additional training they will want to purpose

Each employee will become more valuable, engaged and innovative throughout your organization.

AGENDA

Intro

30m

Keynote:

- What is AI
- Problem & threat of AI and automation
- New (digital) consumer expectations
- Real challenge to organisations

Reframing what we do

30 m

Keynote:

- (Day in the life of) DITLO breakdown
- Spotting the opportunity
- Stepping into the future

Persona

30m

Coffee break

DITLO

60m

Categorizing tasks – manual, paper-based, lengthy, non-realtime, volume, impact, metrics

Opportunities & Threats

30m

Problem statements

30m

lunch

Inspiration

30m

Keynote: Applying AI and automation ideas to apply on your problem statements

Ideation

30m

Each participant documents ideas to address key problem statements

Future state

30m

Each participant to reframe what their DITLO looks like

Future role

30m

Each participant to redesign their roles: objectives, metrics and progression plan

Coffee break

Playback

60m

Each participant pitches their future role and ideas to the group

Q&A

30m

Wrap up

15m
